

JIGSAW Smart Control - Wireless Room Sensor

This small, discreet sensor is not much taller than a standard light switch. It cleverly integrates both accurate temperature measurement and sensitive occupancy detection together in one device for applications where looks are important and you want something to blend into the surrounding room.

Adding a Room Sensor to a room where you've installed a Relay, or are using Hub to control your heating, enables you to see the accurate measured temperature in the room on the app at the same position as the occupants in the room. The Room Sensor also gives you access to 'Footprint Mode': where the system learns when the room is used automatically heating it ready for the occupant's arrival; then turning down the radiators when they leave.

Application

- **Wet Radiator Control**
- **Electric Heating Control**
- **Electric/Wet Underfloor Heating**

Technical Data

- Power Supply: 1 CR123A lithium battery
- Transmission Frequency: 868.42 (EU) MHz
- Operating Temperature Range: 5°C to 30°C
- Detection Range: Front = 10m, +/- 45° = 8m
- Relative Humidity: 5% to 85%
- Enclosure Protection: IP21
- Regulation: EN60950-1:2006, A11:2009, FCC part 15.249, EN300 220-1
- RoHS: Compliant
- Indoor Use Only

Features

- Temperature Detection
- Fully Automatic Heating based on Occupancy
- Individual Room Predictive Heating Schedules
- Motion/Occupancy Detection
- High Accuracy Temperature Control
- Supplied with 1 CR123A battery, lasts for 2 years
